Dear Sir,

My name is Peter Gill from North Queensland.
My Email is
My Postal address is

Firstly I would say that I have had 20 years experience in operating the RACQ Breakdown Service in Innisfail and also a repair workshop in conjunction with the breakdown service.

We also operated a tow truck business alongside these activities.

Several months ago we sold our business and have since retired.

I have several points that I would put to you for consideration.

That all vehicles are fitted with at least proper lumber support in at least the front seats.

That all vehicles are fitted with a standard plug and wiring configuration for the connection of diagnostic tooling and that this plug is fitted in the same place in the cab of the vehicle in an easily accessible position.

That all towing winch up points and tie down points are standard so as not to cause confusion for a tow truck operator no matter how new a person is in their job.

Thank you for the opportunity to participate.

Kindest regards

Peter Gill
